

1

We have a **problem/opportunity meeting** to get to know each other better and to decide which problem we will solve or which opportunity we will seize using innovative technology. If we are not able to pick a good problem/opportunity right away we can do a *Technological Innovation Scan (2)*.

2

We do a **Technological Innovation Scan** with a focus on innovative technology in general or specific technology.

3

We have a **solution meeting** together with our technology specialist to decide how we can best solve the problem or seize the opportunity and how the technology solution (roughly) should look like.

4

We work out a **project proposal** for the solution.

5

We have a **proposal meeting** where we present our project proposal. We will ask for a **go/no-go** after the presentation.

6

We will **start the project**.
